

ENVIRODESIGNS' GIANT SUNSHADES

FRAMES

All giant umbrella frames are made of corrosion-proof and seawater resistant aluminum extrusions. Standard frame finish is white powder coating, with other frame finishes available by special order.

FABRIC COVERS

Customized fabric covers are available in the full range of 100% acrylic solution dyed awning and marine weight fabrics. Providing both sun and rain protection, these fabrics block out almost 100% of the overhead UV rays of the sun, and have excellent water repellency. Treatment with a stain resistant Teflon coating helps to avoid dirt build-up. Waterproof vinyl coated and fire retardent fabrics are also available by special order.

Fabric covers are available in either market style with no valance or the straight valance with bottom edge trimmed in binding of choice. The tension of each umbrella rib can be adjusted to ensure the tautness of the fabric cover after continued use. A protective cover bag with telescoping rod is provided for storage and maintenance of umbrella.

LIGHTING

The giant sunshades may be equipped with internal wiring for lighting. Globe lighting attached to the ribs or a 220v fluorescent lamp attached to the mast is available, depending on model or size of umbrella. For storage, the globe string lighting should be removed from frame.

8-string globe lighting

INSTALLATION

The most secure installation for a giant umbrella is a ground socket or deck plate. A movable base for concrete blocks is available. However, the wind resistance strength does not apply. The Palazzo M16 is only available with a hinged ground socket. Envirodesigns recommends a permanent base for commercial or institutional installations.

Ground Socket

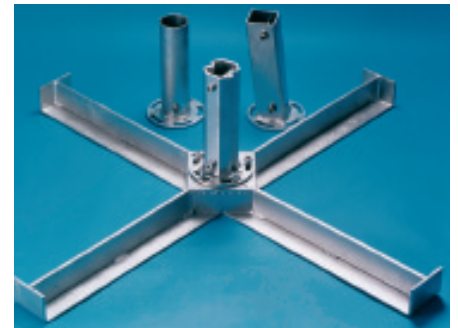

The most secure installation is the ground socket imbedded into a concrete foundation.

Deck Plate

If mounting on solid concrete or wooden deck the deck plate can be securely bolted to patio surface.

Movable base for concrete

The movable base is designed for concrete blocks made to manufacturers' specifications. Wind ratings do not apply.

"Your service was fantastic! I am very impressed. It seemed like my urgency to fix the broken strut was answered with quick and efficient service. That is lacking in so many businesses these days."

– Kevin Proctor, Kelsey's Restaurants, Hamilton, Ontario
